Bone Fractures Management and Treatment | Cleveland Clinic How is a bone fracture treated? A bone fracture is usually treated with a cast and/or splint. A cast or splint will immobilize the bone (keep it from moving) in order to encourage the bones to align (straighten) and to prevent use of the bone. Coding for Closed Treatment of Fractures - AAOS The two keys to understanding the appropriate coding for closed treatment of fractures is to first determine whether the physician provides "restorative treatment" of the fracture; second, determine whether the same physician will be providing all the follow-up care within the 90-day global period.

Fracture Management | EMS World Transverse fracture-The fracture is across the bone, and at a right angle to its long axis. Greenstick fracture-This type of fracture is named after the breaking of a green tree branch. One side.
